Translation Hub

Manage your multi-language requirements
of your digital channels in one place

All your language versions for all your Apps in one place

No application updates are needed based on language fixes

Our unique architecture approach allows you to add or fix language items without requesting the users to update their application — leading to higher customer satisfaction

Organise distributed parallel translations

Assign translations to different experts per language or even by functional domains — eg. card, current accounts, investments, loyalty, legal etc.

### Quickly roll-out new language versions to all your applications

Manage all language versions for all your web or mobile applications in on place

Reduce cost of multi language applications

Translation Hub comes with review functions and processes that allow faster reviews and approval processes as well as re-usable language strings allow multi usage of the same content. Save time and reduce human errors by getting rid of merging legacy excels manually

Centrally and dynamically managed language versions for all your applications

Translation Hub stores and lets you dynamically and safely manage all translations for everyone using your applications. Whether you use it in the cloud or onsite it seamlessly integrates into any of your applications through APIs.
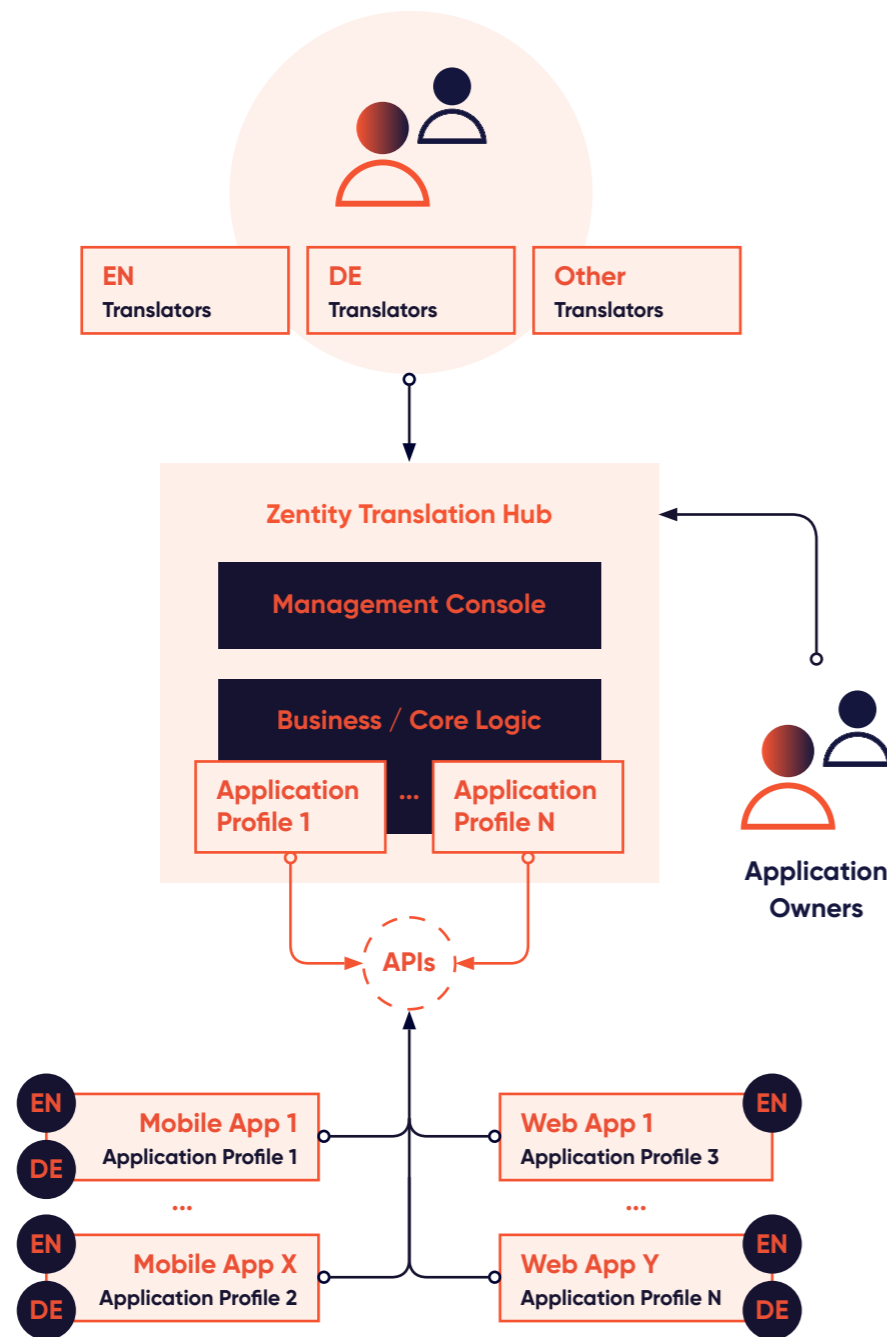

Tech features

01

Allows to provide translation of ANY „strings/texts"

Each text (translation) has its a unique identifier (keyword) that is then used within the channel

02

Seamless integration into any of your front ends

Translation Hub allows any of your channels to access translations through API in real-time

03

Sophisticated User and Content Management

Translation Hub comes with the User Interface allowing you to comfortably manage permission and quality of your translations through a user friendly UI

04

Multiple language support

The Translation Hub architecture allows to provide several language versions to be used in your channels

05

Various support functions allow for effective management of your translations

- An import module allows for easy integration of existing language versions
- Version and release control per application ensure that always the right version is used

06

Availability of sdk for each platform (android, iOS, web) for easier implementation within the projects

The SDK has pre-configured endpoints and a basic logic defining when and how to check if new versions of translations are available

07

Translation Hub can be deployed in the cloud or within your environment

Depending on your needs you can easily use Translation Hub in the mode of „SaaS" or „on-premises" implementation, depending on your target architecture

08

Multichannel / Omnichannel ready/ approach

Keep consistent translations across all of your channels, respecting the Omnichannel principles

09

**Support of left-to-right and right-to-left languages**

All languages and alphabets supported. As soon as you can write it on the keyboard, you can transfer it to your applications

10

Support of multi-byte characters

Sometimes words are not enough and you just have to write 👍🖊️🎉

Use case – Zentity

zentity

As Zentity we have been looking for a more effective way to develop and maintain multi lingual applications for our customers. Besides effectiveness and cost efficiency our main target was to have a solution that allows a minimum of user disruption. With Translation Hub we want to share one of our delivery efficiency gems with you.
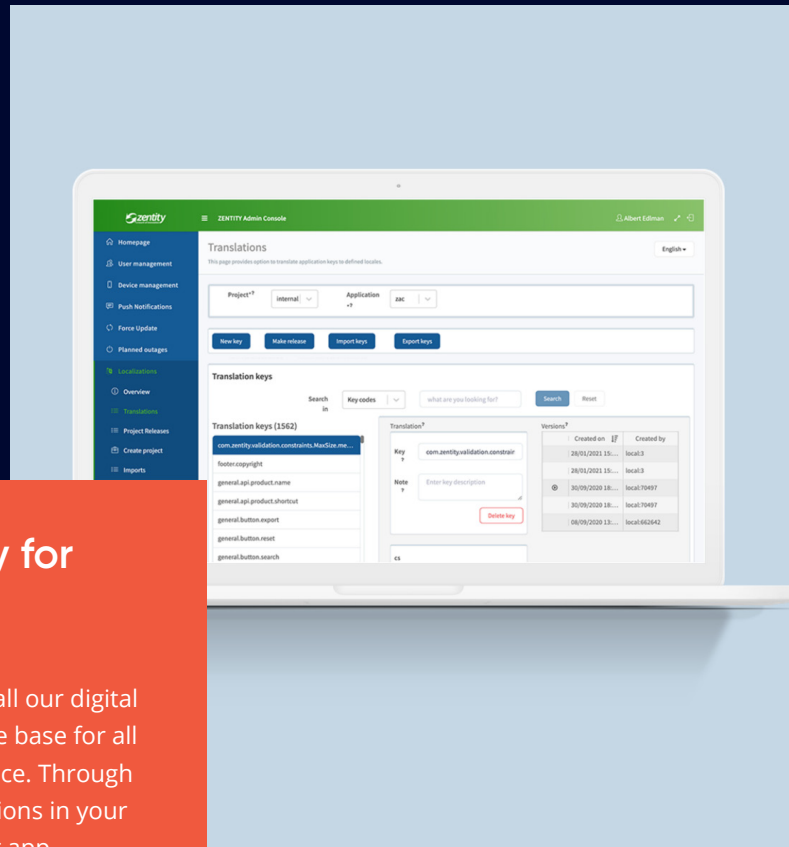

Multinligual functionality for all your channels

Zentity is using Translation Hub in almost all our digital channel projects. It's giving us the language base for all channels conveniently managed in one place. Through its architecture it allows to update translations in your apps without issuing a new release of your app — making it convenient for your users

Translation Hub keeps all your language versions organized and up to date. User Interface allows you to work with different roles and permissions during the project and also allows you to manage

different versions/release for your different channels. Translation Hub enables your digital channels to access all your language strings through APIs in real time whether you have Translation Hub

on premises or in the cloud (SaaS). With Translation Hub you can update your translations continuously.
